

REDAX[®]

Silicone Reservoir

Silicone bulbs for wound drainage

Drentech pump: Silicone Reservoir

A safety needle with a biohazard protection sheath for puncturing implanted port system. The Safety mechanism reduces the risk of needlestick injuries and provides protection against infections.

This type of bellow would typically be used for: ENT & Maxillofacial, Neurosurgery, Abdominal, Mastology, Vascular and Orthopaedics

Clear volume measurements

- Easy and clear volume markers

Priming hole

- User friendly priming valve
- One way / anti-reflux valve

drain connections

- 100ml with 1 drain connector
- 200ml & 400ml with 2 drain connectors
- Offering greater user versatility

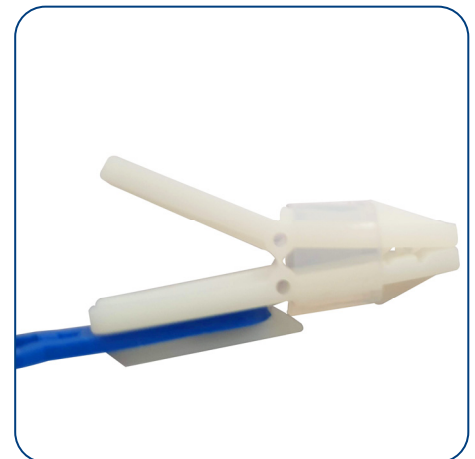

Drain connector

- To be used with drains FG 7 - FG 12
- Connector not required for drain sizes FG 15 - FG 19

Strong connection

- The connector securely attached to the drain connection on bulb

Strong secure clamp

- This clamp is used to connect the bulb close to the patient
